KEYWORDS: BIODIVERSITY – EVOLUTION – BIOGEOGRAPHY – NEOTROPICS – PHYLOGENETICS

RESEARCH INTERESTS: My main scientific goal is to understand *the evolution and distribution of biodiversity*, by studying the *formation, extinction, and migration* of species. I am particularly interested in *teasing apart the relative roles of abiotic* (e.g. climate and landscape changes) *and biotic* (e.g. competition, adaptations) *drivers of biodiversity changes through space and time*. To achieve these goals, I study the distribution of species, their genetic variation, and the fossil record. Most of my work has dealt with the tropics, especially in South America where most species occur today. I lead an *inter-disciplinary research group* comprising students and scholars from many countries.

PERSONAL INTERESTS

I spend most of my free time interacting with my family, playing with the kids, and doing outdoor activities such as camping, diving (I am a PADI divemaster with >400 logged dives), looking for wildlife and going to the family's cottage on the island of Tjörn. I also enjoy reading popular science books; long-distance running; gardening and carpentering; collecting, mounting and identifying beetles and butterflies; photographing and filming; listening to good music; cooking and baking; and going out with friends and colleagues in Sweden and abroad.
